

- 5) The pigment composition according to at least one of claims 1 to 4 wherein the weight ratio of disazo pigment of formula (I) to organic orange, red or violet pigment is in the range from (0.1:99.9) to (99.9:0.1).
- 6) The pigment composition according to at least one of claims 1 to 5 wherein the weight ratio of disazo pigment of formula (I) to organic orange, red or violet pigment is in the range from (10:90) to (90:10).
- 7) The pigment composition according to at least one of claims 1 to 6 which is a solid solution or mixed crystal.
- 8) The process for producing a pigment composition according to at least one of claims 1 to 6 by mixing the disazo pigment of the formula (I) with the organic orange, red or violet pigment or pigments.
- 9) The use of a pigment composition according to one or more of claims 1 to 7 for pigmentation of macromolecular organic materials, for example for pigmentation of plastics, resins, coatings, paints, electrophotographic toners and developers, electret materials, color filters and also of inks, including printing inks, including ink jet inks, and seed.
- 10) A macromolecular organic medium comprising a coloristically effective amount of a pigment composition according to one or more of claims 1 to 7.
